Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "4" has been used to designate both receiver unit (Fig. 4) and receiver unit (Fig. 6b). In Fig. 6b, applicant refers to reference unit 4 including the rectifier (21) and the low pass (15). It is unclear as to the reference unit shown as a box in Fig. 6b. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: Specification uses claim numbers which are not permitted since during the prosecution, the numbering of the claims may change. Appropriate correction is required.

5. The disclosure is objected to because of the following informalities: At page 6, line 21 and 25 and page 11, “Ut” (partial voltage) is not labeled in any figures. Appropriate correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Wallen (6,634,240).

Wallen teaches an ultrasonic flow sensor having at least one converter (6, 7), a receiver unit for monitoring when the ultrasonic signal exceeds a predetermined threshold value and stores the information about the amplitude of the signal in memory (14) (col. 4, lines 26-29).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2855

9. Claims 2-6, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wallen.

Wallen teaches all the features of the instant invention except for explicitly teaching the elements as the low pass filter and sample/hold (S/H) for holding and storing information regarding the amplitude. It would be obvious to a person having ordinary skill in the art at the time the invention was made to include such elements in the processing unit since such elements are inherent elements that are used in order to filter out unwanted noise signals and store them for future use or comparison with the subsequent signals.
